

ACKNOWLEDGMENTS

I would like to acknowledge and to thank my thesis advisor Professor Delchambre Alain, for giving me the opportunity to work with him on several projects and for his constant help and support and availability during the realization of this thesis. For providing me with many useful contacts and a huge number of research papers. He gave me the chance to work independently, but always kept an overview on the progress being made. Whenever it was necessary, I could benefit from his broad research experience. I would like to acknowledge and extend my gratitude to Professor Falkenauer Emanuel. His sharp mind and clear ideas always gave me the insights necessary to get into the right track. Once again, thanks Alain, Emanuel for all your knowledge and your wise advice.

A number of persons contributed to this thesis and without their support its completion would not have been possible. First, I want to thank Doctor Pellichero Fabrice for his support and advice. I remember the long fruitful discussions, meditations and reflections about design problems. My gratitude to De Lit Pierre for the pleasant discussions with him, his stimulating remarks and fruitful suggestions were the basis for the achieved results. Thanks to Fouda Patrick for the fruitful discussions about the badness and goodness and for accepting to read chapters of my thesis.

Additionally, I acknowledge the financial support of the 'Région Wallonne' through the project entitled "Outils d'aide à la conception interactive des produits et de leur ligne d'assemblage". The industry project was carried out together with CISAL team. Thanks to them for joining the laborious way of working in the project and for sharing the interesting and sometimes frustrating experiences such industry projects offer. My thanks to the staff of 'Service de Mécanique analytique et CFAO'. My thanks to Shirley Wayne who her availability have been very helpful for me.

Wafiq Zouhair a good friend for letting me choose computer science as field of research. I remember our first meeting at the Brussels Underground. Thank you so much... I also want to thank my friend Kamouni Rachid, for his major influences and long fruitful discussions. Vilain Elhadji for his support and smooth ideas, he went beyond his duties as colleague and became a friend, always willing to help and discuss my ideas. Fazry Mohamed for his continuous support and advises. Doctor Zapkodo Barnabe for his courage and silence, I'm sure we will reach the hill's top one day. Thanks to Doctor El Bahir Lhoussain and El Hasnaoui Mohammed for their advice and support and for accepting to share the same way. My thanks also to all my friends and particularly El Mamoun Khalid, Mouji Hassan, Salhi Youssef,

Taher Abdelkader, Ababou Nour-Eddine, Mohajir Mohammed et Badr. Eddine, ... for their welcome distractions and continuous support.

My family 'suns of my universe' for bringing light to my life. Their love and support were one of my main sources of strength in some of the crucial moments during the design and especially writing of this thesis. Special thanks to my wife Aaida for her advice and unwavering support.

I tanks also all the people who gave me their moral support during all these long years, as well as the many interested readers of my research papers for some stimulating discussions at conferences, workshops and over the internet. I want to thank thousands of times all the people who put up with me saying "I'm going to finish it soon ... really I'm ...".

Finally my thanks to all the persons who accepted to be part of my jury, Professors Alain DELCHAMBRE, Pierre GASPART, Emanuel FALKENAUER, and Bertrand MARESCHAL, Jean-Michel HENRIOUD (du Laboratoire d'automatique de Besançon, en France), Benoît Raucent (de l'université catholique de Louvain).

And by the way I would like to thank the cruel and indifferent creative process of natural evolution for providing the inspiration for my work. Long may it continue to do. Thanks to those who make time short even if it was very long..

Brahim Rekiek.
